Normal handling of lead plated bolt assembly does not present a lead exposure. A lead health hazard is present if lead plated copper connectors are melted or mechanically cleaned or abraded and there is exposure to lead particles.	
Health Hazards:	Acute - most will pass through body unabsorbed; at very high exposures, may cause lead intoxication with symptoms of nausea and abdominal cramps. Chronic - anemia, malaise, tremors, gastritis, liver changes.
<i>California Proposition 65 Warning – Battery posts, terminals, lead plated copper connectors, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and reproductive harm. Batteries also contain other chemicals known to the State of California to cause cancer. Wash hands after handling.</i>	

SECTION IV: FIRST AID MEASURES	
Inhalation: No inhalation of lead particles possible with normal handling of lead plated copper connectors.	Skin Contact: Wash thoroughly with soap and water if contact with lead or copper metallic particles from cleaning or mechanical abrasion.
Eye Contact: If contact with lead metallic particles, flush with water; get immediate medical attention.	
Ingestion: If ingestion of lead metallic particles, induce vomiting, seek medical attention immediately.
